RECOMMENDED CLEANING MACHINES

RECOMMENDATIONS OF CLEANING MACHINES AND CLEANING TECHNIQUES

See cleaning instructions for use.

There are cleaning machines of different brands, models and price ranges. For best results, Bolon recommends choosing a machine with brush selection technology or orbital technology. The cleaning frequency and degree of soiling can affect the choice of machine needed.

Use as few chemicals as possible. It benefits both the environment and the cleaning machine.

Most types of dirt are removed by using only clean water. For more severe stains, we recommend that the stain is pre-treated by spraying a solution of detergent depending on the type of dirt and allowing it to work for a while before machine cleaning. Really difficult stains can also be pre-treated manually with a brush. Below is a selection of suitable cleaning machines from some well-known brands.

SMALL

ORBOT SIGN / SURF

- Hybrid battery/networked
- Orbital technique
- Gentle deep cleaning
- Narrow surfaces
- Low water consumption

HAKO CLEAN ROLLY

- Battery powered
- Single cylinder brushes
- Narrow surfaces
- Detachable tanks

MEDIUM

ORBOT SPRAYBORG

- Networked
- Orbital technique
- Gentle deep cleaning
- Medium-sized surfaces
- Low water consumption

KÄRCHER B35/12 C

- Battery powered
- Single cylinder brushes
- Swivel brush head
- Small to medium-sized surfaces

TENNANT T1

- Networked
- Single cylinder brushes
- Small to medium-sized surfaces

LARGE

ORBOT LIFE

- Battery powered
- Orbital technique
- Gentle deep cleaning
- Large furnished areas
- Low water consumption

KÄRCHER BR45/22C

- Battery powered
- Single cylinder brushes
- Swivel brush head
- Large open areas

HAKO B45 CLC

- Battery powered
- Wheel drive forwards/backwards
- Dual cylinder brushes
- Large open areas
